

earthquakes volcanoes and tsunamis pdf

An earthquake is the sudden, rapid shaking of the earth, caused by the breaking and shifting of underground rock. Earthquakes can cause buildings to collapse and cause heavy items to fall, resulting in injuries and property damage. Earthquakes can: Happen anywhere – though higher risk areas include California, Alaska, and the Mississippi Valley; Happen without warning; Cause

A tectonic weapon is a hypothetical device or system which could create earthquakes, volcanoes, or other seismic events in specified locations by interfering with the Earth's natural geological processes. It was defined in 1992 by Aleksey Vsevolodovich Nikolayev, corresponding member Russian Academy of Sciences: "A tectonic or seismic weapon would be the use of the accumulated tectonic energy ...

Tectonic weapon - Wikipedia

Surviving an earthquake and reducing its health impact requires preparation, planning, and practice. Far in advance, you can gather emergency supplies, identify and reduce possible hazards in your home, and practice what to do during and after an earthquake.

Earthquakes|CDC

An earthquake (also known as a quake, tremor or temblor) is the shaking of the surface of the Earth, resulting from the sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes can range in size from those that are so weak that they cannot be felt to those violent enough to toss people around and destroy whole cities.

Earthquake - Wikipedia

By Andy Darnley A mountain with a center of hot magma is called a volcano. Under the right circumstances, volcanoes erupt and release a flow of lava. When this happens, they are as beautiful as they are scary and dangerous. Although most people recognize images of erupting volcanoes, they may not know a lot about [â€]
